Figure 1. Layout of the irradiation setup. Sample vials 1 to 4 were placed under a UV irradiation spot. Reference vial (R) was placed outside the UV irradiation spot.

Figure 2. The photon flux produced by the XBO 450W/OFR UV lamp with and without long-pass filter between 200-400 nm. An uncertainty of 5% is assumed for the intensity to account for inconsistencies over each 1 minute recording interval.

Table 1. Quantitative analysis of 0.5 g of 880 ppm chlorite IC standard+10 g silica sand, 48 h irradiation, Mars ambient conditions.
